

ANAS SAYED

AI Engineer | Fintech & Decision Intelligence

anas.sayed004@gmail.com | +91 7021493093 | Mumbai, India
[linkedin.com/in/anassayed78](https://www.linkedin.com/in/anassayed78) | github.com/AnasSayed27 | anassayed27.github.io

PROFILE

Final-year B.Sc. Computer Science student with hands-on experience in credit risk modeling, production ML pipelines, and generative AI systems. Built and deployed containerized ML microservices using XGBoost, SHAP, FastAPI, and Docker. Seeking AI/ML, data science, and fintech engineering roles.

EDUCATION

B.Sc. Computer Science — D.G. Ruparel College, Mumbai

2024 – 2027

GPA: 8.00 / 10.00 FY

- Google Machine Learning Crash Course — Google (2024)
- Excel for Business — Great Learning (2024)

TECHNICAL SKILLS

Languages: Python, SQL, Excel

AI & ML: TensorFlow, Keras, Scikit-learn, NumPy, Pandas, XGBoost, SHAP (Explainable AI), PyPortfolioOpt, Matplotlib, Seaborn

GenAI & Agents: CrewAI, LangChain, Hugging Face (Transformers), Sentence-Transformers, Gemini APIs

Deployment & Web: FastAPI, Uvicorn, Streamlit, Docker, Docker-Compose, Git, GitHub, Git LFS

Concepts: RAG (Custom), Multi-Agent Orchestration, Vector Embeddings, EDA, Feature Engineering, Cosine Similarity, REST APIs, Prompt Engineering (CoT/ReAct), Credit Risk Modeling, RBI Compliance, Time-Series Analysis, Microservices

EXPERIENCE

Machine Learning Engineer Trainee (OJT) | Fusion Klassroom Edutech Limited

DEC 2025 – May 2026

- Annotated and structured data from video-based sources, extracting and recording key attributes into Excel and Google Sheets for machine learning workflows.
- Performed contextual analysis and inference to populate multiple data fields from unstructured video content while maintaining high labeling accuracy.
- Conducted quality verification and validation of annotated datasets, consistently meeting project requirements and submission deadlines during the On-the-Job Training program.

PROJECTS

SubSlash AI | Autonomous Multi-Agent Marketing System

Python, CrewAI, LangChain

- Architected a 4-agent crew using CrewAI and Gemini 2.5 Flash, implementing hierarchical task delegation to autonomously generate end-to-end GTM strategies.
- Engineered custom rate-limiting logic and context-window management to maximise API efficiency and maintain coherent long-form multi-agent outputs.

DevDocs AI | RAG Q&A Bot for Developer Documentation

Python, HuggingFace, RAG

- Built a RAG pipeline from scratch without vector databases, implementing Cosine Similarity search using NumPy — demonstrating deep retrieval fundamentals beyond off-the-shelf wrapper usage.
- Engineered a custom orchestration script to fetch dense embeddings via Hugging Face SentenceTransformers and inject structured context into the LLM prompt for precise, low-hallucination responses.

Potato Disease Classifier | End-to-End Deep Learning App

TensorFlow, CNN, FastAPI

- Deployed a custom CNN architecture (Conv2D, MaxPooling, Dropout) via a FastAPI backend, exposing a REST API endpoint for real-time image inference.
- Built a full prediction pipeline handling image preprocessing and serialisation, serving results to a frontend with under 100ms latency.
